

DEPARTMENTS

EDITOR'S NOTEBOOK	2
Why flight tracking is not enough	
IN BRIEF	4
Hypersonic weapon; de-icing Reapers; artificial lightning; anti-radiation vest	
ENGINEERING NOTEBOOK	8
Will Skylon fly?	
THE VIEW FROM HERE	12
NASA's next astronauts	
10 QUESTIONS	16
Andy Weir, author of "The Martian"	
OUT OF THE PAST	44
CAREER OPPORTUNITIES	46

FEATURES

CHASING BROADBAND SATCOM	20
Customers around the world are no longer amazed by the communications capacity of high throughput satellites. They want flexibility to shift capacity where it's needed most. The question is how to give them that flexibility. <i>by Debra Werner</i>	
FACEOFF OVER AIRLINER TRACKING	28
Two years after the disappearance of MH370, two rival satellite companies are vying to convince airlines and aviation authorities that each has the better plan to keep airliners from vanishing. <i>by Warren Ferster</i>	
VIEWPOINT: FRESH THINKING ABOUT MARS	34
For NASA to get humans to Mars in the 2030s, it's going to have to target research wisely and devise a realistic strategy for the journey. <i>by Dennis Bushnell and Robert Moses</i>	
ANALYSIS: A BETTER WAY TO BUILD AEROSPACE PARTS	40
Choosing, designing and making parts out of materials has traditionally followed the "make it, break it" approach that can necessitate expensive rework. But integrated computational materials engineering offers a better way to do it right the first time through modeling and simulation. So why aren't more engineers doing that? <i>by Michael Sangid and John Matlik</i>
