## Cover

**SIG Sauer 9mm MPX with silencer and Romeo4C robust, compact red dot sight, offering versatility through its modularity, allowing the user, who here is holstering a P320 and taking cover behind an armoured vehicle, to adapt it to fit his/her needs and environment. (Photo: SIG Sauer)**

Small inserts on cover depict Geospatial agencies seek to gauge the effectiveness of its Geospatial Intelligence (GEOINT), the space sector's contribution is evolving rapidly (Photo via PD); legacy SATCOM solutions have required soldiers to point antennae at geo-stationary satellites to ensure strong enough signals for transmission (Photo: US DoD); and TRACKFIRE operators are able to maintain the line of sight on the target, thereby greatly reducing target acquisition times (Photo: Saab).

Small insert in contents shows W.L. Gore & Associates' newly opened Environmental Chamber, which can recreate 85-95% of the world's environments, allowing the company to evaluate the performance of its fabrics products in specific conditions and collect quantitative data on the protection provided and resulting comfort of the wearer. (Photo: Gore)

The last page shows the FN SCAR-L STD assault rifle, chambered in 5.56x45mm NATO calibre and fitted with a standard 14.5in barrel. The operator can replace the standard barrel with a short 10in barrel for close quarter combat in less than five minutes (the rifle is then called FN SCAR-L CQC). (Photo: FN Herstal)
